Homestead Tax Credit

Introduction

The homestead tax credit program directs property tax relief to low-income homeowners and renters. The program is often referred to as a "circuit breaker" since it is intended to provide relief once property taxes exceed a taxpayer's ability to pay them. Relief is provided as a credit reducing individual income tax liability or as a cash refund if the credit exceeds income tax due, and the homestead credit is referred to as a refundable credit due to this characteristic. Credits are limited to Wisconsin residents 18 years of age or older. For tax year 2017, homestead credits of \$78.0 million were extended for property taxes or rent accrued in 2017. These credits were provided to approximately 156,000 households.

This paper provides the following: (1) a description of the formula used to determine the credit and eligibility requirements; (2) historical data regarding annual claims and program expenditures; (3) information regarding characteristics of program participants; and (4) a discussion of the program's effectiveness as a means for providing property tax relief.

Homestead Tax Credit Formula

The amount of the credit received by claimants depends on the interaction of household income and allowable property taxes or rent under the three primary factors used in the homestead tax credit formula: the income threshold; the maximum income level; and the maximum property taxes or rent constituting property taxes.

For claimants with incomes below the income threshold, the credit is equal to 80% of their property taxes or rent constituting property taxes up to the maximum in property taxes or rent. Rent

constituting property taxes is 25% of rent if payment for heat is not included in rent and 20% of rent if payment for heat is included.

Under 2009 Wisconsin Act 28, beginning with tax year 2010, the three formula factors were to be indexed annually based on the change in the Consumer Price Index. After one year of indexing, 2011 Wisconsin Act 32 repealed the annual indexing of the formula factors beginning with tax year 2011. Therefore, tax year 2010 was the only year in which indexing of the credit's formula factors occurred. As a result, the credit formula factors remain as follows: the maximum property taxes or rent constituting property taxes is \$1,460; the income threshold is \$8,060; and the maximum income level is \$24,680. These factors produce a maximum credit of \$1,168.

Credit calculations for claimants with household income exceeding \$8,060 require two steps. First, allowable property taxes are reduced by 8.785% of income exceeding \$8,060. Second, the result is multiplied by 80%. The homestead credit formula may be expressed mathematically as:

$$\text{Credit} = [\text{Property Taxes} - 8.785\% \times (\text{Household Income} - \$8,060)] \times 80\%$$

For households with property taxes or rent equal to or exceeding the \$1,460 maximum, the credit becomes zero when income reaches \$24,680. For households with property taxes or rent less than \$1,460, the credit will reach zero at a lower income level. Figure 1 provides examples of the computation of the homestead tax credit for two hypothetical households. Table 1 shows the homestead tax credit available to claimants at various levels of income and property taxation.

Figure 1: Homestead Tax Credit Computation

Example A: For a claimant with household income less than the income threshold (\$8,060).

Calculation of homestead tax credit for a claimant with \$6,000 of household income and property taxes of \$1,460.

$$\begin{aligned}\text{Homestead tax credit} &= \text{Property taxes} \times 80\% \\ &= \$1,460 \times 80\% \\ &= \$1,168^*\end{aligned}$$

Example B: For a claimant with household income greater than the income threshold (\$8,060).

Calculation of homestead tax credit for a claimant with \$12,000 of household income and property taxes of \$1,460.

$$\begin{aligned}\text{Homestead tax credit} &= [\text{Property taxes} - 8.785\% \times (\text{Income} - \$8,060)] \times 80\% \\ &= [\$1,460 - 8.785\% \times (\$12,000 - \$8,060)] \times 80\% \\ &= [\$1,460 - 8.785\% \times \$3,940] \times 80\% \\ &= [\$1,460 - \$346] \times 80\% \\ &= \$1,114 \times 80\% \\ &= \$891^*\end{aligned}$$

*The actual credit received may be slightly different because the credit is taken from a table supplied with the homestead tax credit form rather than being computed by formula for every income and property tax combination.

Application Requirements

A claimant must meet each of the following eligibility conditions to qualify for the homestead credit:

1. Age. The claimant must have been 18 years of age or older by December 31 of the year for which the claim is filed. For example, an applicant must have reached 18 years of age by December 31, 2018, in order to file a claim based on 2018 taxes.

2. Dependent Status. The claimant cannot have been claimed as a dependent for federal income tax purposes in the year to which the claim relates, except for persons 62 years of age or older.

3. Residency. The claimant must have been a legal resident of Wisconsin for all of the preceding year.

4. Nursing Home Residents. At the time of filing the claim, the claimant may not be a nursing home resident participating in the medical assistance program.

5. Public Assistance Recipients. A credit cannot be received for any month that the claimant received \$400 or more of cash benefits under a county relief program. Further, a credit cannot be received for any month that the claimant participated in a community service job or transitional placement or received a grant as the custodial parent of an infant under the Wisconsin Works (W-2) program. A claimant can receive a prorated credit for each month not affected by these restrictions.

6. Other Credit Participants. The claimant cannot receive a homestead tax credit in a year in which a pre-2010 or a per acre farmland preservation tax credit is received. Also, no claimant for a homestead tax credit may claim a veterans or surviving spouses property tax credit in the same year for which a homestead tax credit is being claimed.

7. Tax-Exempt Housing Residents. The claimant cannot have lived the entire year in housing that is exempt from property taxes (unless the housing is owned and operated by a housing authority that makes payments in lieu of property taxes). Persons who live in tax-exempt housing

Table 1: Homestead Tax Credit (Based on Various Levels of Income and Taxes)

Household Income	Homeowners' Property Taxes								Renters' Monthly Rent**

Over 24,680	0	0	0	0	0	0	0	0	0	0	0	0	0

* Only the first \$1,460 of property taxes or rent constituting property taxes is considered in determining the amount of the credit.

**Assumes no heat included in rent; rent constituting property taxes equals 25% of gross rent for the year.

Note: If the amount of credit determined by the formula is more than \$0 and less than \$10, the amount of the credit equals \$10. The actual credit received may be slightly different than the amounts shown because the credit is read off of a table supplied with the homestead tax credit form rather than being computed by formula for every income and property tax combination.

and who still own their former home may claim a credit based on property taxes accrued on their former home for up to one year if the claimant has attempted to sell the home, but has not rented or leased the home. A prorated credit can be received for the portion of the year that a claimant resided in housing subject to property taxation.

8. Earned Income. Claimants with no earned income are not eligible for the credit, unless the claimant, or the claimant's spouse, is at least 62 years of age or disabled in the year for which the claim is filed. For the tax year of the claim, individuals claiming a disability must provide proof of their disability, which may include a statement from the Veteran's Administration certifying the claimant is receiving a disability benefit due to a 100% disability, documentation from the Social Security Administration stating the date the disability began, or a statement from a physician

stating the beginning date of the disability and whether the disability is permanent or temporary.

9. Due Date for Filing Claims, Penalties, and Administration. Eligible households are required to file a claim for the homestead credit with the Department of Revenue (DOR). Claims are generally due on the 15th of April four years after the 15th of April following the year to which the claim relates (for example, the deadline for filing a 2018 homestead credit form is April 15, 2023). State law specifies that individuals who file fraudulent or excessive claims could be found guilty of a Class H felony and may be fined not more than \$10,000 or imprisoned for not more than six years (three years in prison and three years of extended supervision), or both, and would be required to pay the costs of prosecution. Income tax provisions related to assessments, appeals, and collection apply to the homestead credit.

Since tax year 2013, individuals filing a fraudulent credit claim are prohibited from filing a claim for a homestead credit, or any refundable state income tax credit, for the next 10 tax years. Since tax year 2013, a total of 25 individuals have been prohibited from filing a homestead credit claim for the next 10 tax years due to fraud. For tax year 2017, DOR did not determine any homestead claims were fraudulent. Individuals filing a reckless credit claim are prohibited from filing a claim for a homestead credit, or any refundable state income tax credit, for the next two tax years. For tax year 2017, DOR declared 43 homestead claims reckless with penalties assessed of \$28,196.

Household Income and Property Taxes

Household Income. Household income includes only the income of the claimant and his or her spouse. There is no test for total wealth or assets owned by claimants.

Household income is broadly defined to reflect most cash resources available to claimants, and includes all income that is taxable for Wisconsin income tax purposes. It also includes the full amount of income sources that are only partially taxable by Wisconsin, such as unemployment compensation and capital gains. Also, certain items that are excluded from taxation are included in the definition of household income, such as social security benefits, excluded dividends and interest, contributions to IRAs, and child support. The Appendix lists all of the income sources included in household income.

A downward adjustment is made to household income for family size. Since tax year 2010, the adjustment equals \$500 for each dependent who lives with the claimant for more than six months during the year. Prior to 2010, the adjustment was \$250 per dependent. This provision helps target funds to families with dependents.

Property Taxes. In determining the

homestead credit, eligible households can claim up to the \$1,460 maximum allowable property taxes or rent constituting property taxes. This is the claimant's property tax levy, or rent, exclusive of special assessments, delinquent interest, and charges for services. Property taxes include any municipal permit fees assessed on mobile and manufactured homes. For farmers, the credit can be claimed on property taxes or rent accrued on up to 120 acres of land contiguous to the claimant's principal residence.

For renters, rent constituting property taxes is equal to 25% of actual rent if payment for heat is not included in the rent payment and 20% of actual rent if payment for heat is included. Otherwise, rent may include the value of utilities if utility payments are included in gross rent paid to the landlord. Rent includes any rent paid to a landlord for the parking of a mobile or manufactured home and any municipal fee assessed on a rented mobile or manufactured home. A certificate filed by the landlord documents rent payments and adjusts gross rent to exclude nonoccupancy services.

Program Expenditure History

The annual cost of the homestead program grew from \$2 million in 1964, when the program began, to \$10 million in 1972. During this period, the credit was limited to elderly claimants. Since then, expenditure levels have changed in response to modifications to the formula factors, as well as to economic conditions and other influences, such as changes to state property tax relief programs. Without changes to the formula factors, the program's cost generally decreases over time because increases in household income cause fewer individuals to be eligible for the credit and smaller credits for claimants who remain eligible.

The credit's first major change occurred for tax year 1973, for claims filed in 1974, when

Table 2: Homestead Tax Credit Participation and Formula Factors by Tax Year

Tax Year	Count	% Change	Amount (Millions)	% Change	Average Credit	% Change	Income Threshold	Maximum Income*	Maximum Property Taxes
2008	222,422	0.9%	\$115.9	2.8%	\$521	1.9%	\$8,000	\$24,500	\$1,450
2009	235,094	5.7	121.1	4.5	515	-1.1	8,000	24,500	1,450
2010	238,172	1.3	125.2	3.4	526	2.0	8,060	24,680	1,460
2011	234,996	-1.3	125.2	0.1	533	1.4	8,060	24,680	1,460
2012	222,356	-5.4	115.9	-7.5	521	-2.2	8,060	24,680	1,460
2013	212,343	-4.5	110.8	-4.4	522	0.2	8,060	24,680	1,460
2014	193,575	-8.8	99.9	-9.8	516	-1.1	8,060	24,680	1,460
2015	183,529	-5.2	93.9	-6.1	511	-0.9	8,060	24,680	1,460
2016	174,925	-4.7	89.3	-4.8	511	-0.2	8,060	24,680	1,460
2017	155,903	-10.9	78.0	-12.6	501	-2.0	8,060	24,680	1,460

*Household income was reduced by \$250 for each dependent in tax years 2008 and 2009 and by \$500 for each dependent beginning in tax year 2010.

eligibility was expanded from individuals 62 years of age or older (60 if disabled) to individuals 18 years of age or older, and the program's cost increased to over \$35 million. The credit's cost increased in ensuing years and exceeded \$100 million in 1984 in response to various changes to the formula factors. It remained at or above that level through 1994. Fewer formula modifications, as well as several state property tax relief initiatives, caused program expenditures to decrease to \$80 million in 1999. Credits increased to almost \$100 million in 2000 when the maximum income factor was increased from \$20,290 to \$24,500, and surpassed the \$100 million level in the succeeding year.

Table 2 reports homestead credit expenditures, by tax year, since 2008. Since the tax year 2000 increase in the maximum income factor, the only formula change occurred in tax year 2010, when the income threshold, maximum income, and maximum property tax factors were indexed for inflation and the dependent adjustment was increased from \$250 to \$500. In response, the credit's cost increased from \$121.1 million in tax year 2009 to \$125.2 million for tax years 2010 and 2011. The indexing provision was in effect for only one year and was sunset in 2011. Without

changes in the formula factors, the credit's cost has decreased since 2011.

Table 3 shows homestead credit expenditures by fiscal year since 2008-09. Total expenditures in Table 2 differ from the amounts shown in Table 3 because Table 2 reports tax year information, using annual, aggregate statistics data, and Table 3 shows expenditures by fiscal year. The year-to-year expenditure changes in Table 3 are similar to those reported in Table 2. The credit amounts reported in Table 3 are higher because claims may be filed for the current tax year, as well as for the four previous tax years.

Table 3: Homestead Tax Credit Expenditures

Fiscal Year	Amount (Millions)	% Change
2008-09	\$124.6	-0.4%
2009-10	129.2	3.7
2010-11	133.9	3.6
2011-12	133.7	-0.1
2012-13	122.8	-8.2

Total	155,903	100.0%		\$78,047,442	100.0%		\$501

Characteristics of Program Participants

Tables 4 and 5 provide descriptive information about characteristics of homestead credit claimants, based on tax year 2017 aggregate statistics. Table 4 shows the distribution of homestead credits by household income. The majority of claimants were in the middle of the homestead income distribution (58.8% had household income between \$7,500 and \$17,500). However, claimants within this group received lower average credits (a \$595 average for the group) than those with lower income levels, illustrating the "circuit breaker" nature of the credit formula.

Table 5 shows the distribution of homestead credits by age for 2017. Claimants over age 65 represented 33.0% of total claimants and received 29.1% of total credits. Conversely, only 7.8% of all claimants were 25 years old or younger and these individuals received 7.2% of total credits.

In 2017, the amount of credits received by renters exceeded the amount received by homeowners. Renters totaled 98,250 claims (63.0%) and received a total of \$47.9 million (61.4%) in credits. Homeowners totaled 57,653 claims

Table 5: Homestead Tax Credits by Age (Tax Year 2017)

Age	Claimants		Credits Claimed		
	Count	% of Total	Amount	% of Total	Avg. Credit
Unknown	809	0.5%	\$401,972	0.5%	\$497
18 - 25	12,182	7.8	5,646,104	7.2	463
26 - 35	20,720	13.3	10,656,904	13.6	514
36 - 45	16,393	10.5	8,891,596	11.4	542
46 - 55	21,814	14.0	12,297,638	15.8	564
56 - 65	32,616	20.9	17,450,106	22.4	535
Over 65	<u>51,369</u>	<u>33.0</u>	<u>22,703,122</u>	<u>29.1</u>	442
Total	155,903	100.0%	\$78,047,442	100.0%	\$501

(37.0%) and received a total of \$30.1 million (38.6%) in credits.

Although not shown in the tables, social security, supplemental security income (SSI), and railroad retirement payments made up 50.7% of total household income for all homestead credit claimants combined. Overall, nontaxable income (income not included in adjustable gross income) comprised 60.3% of total household income. The remaining 30.7% of household income was taxed.

Formula Changes and Program Participation

Homestead participation and credit amounts can change over time in three major ways. First,

rising income will cause some claimants to exceed the maximum income level of \$24,680. Second, other claimants' income may rise above the income threshold of \$8,060, resulting in diminished credits or no credits. Third, rising property taxes or rents may increase credits, until the tax bill or rent exceeds the \$1,460 in maximum allowable property taxes or rent constituting property taxes.

The net impact on a claimant's credit depends on the interaction of changes in the claimant's income and property taxes. Over time, as overall income and property tax levels change, some policymakers have suggested changes in the five formula factors:

Percent of Property Taxes Reimbursed. Increasing this percentage (currently 80%) would increase credits for all claimants. This would not affect the distribution of benefits or the number of claimants.

Property Tax Limit. Increasing just the \$1,460 limit would target the expansion to those claimants with property taxes, or rent constituting property taxes, that exceed the current limit. Claimants with relatively low property tax amounts would either be unaffected or experience a decrease in their homestead credits depending on changes to the other formula factors.

Reduction Rate for Excessive Income. If the 8.785% reduction percentage in the phase-out range for the credit is lowered and the maximum property tax and income threshold are left unchanged (this would also imply an increase in the maximum income level due to the interdependence of the formula factors), benefits to all claimants with incomes above the income threshold of \$8,060 would increase. Also, there would be an increase in the number of eligible claimants.

Maximum Income Level. Increasing this level of \$24,680 while holding the maximum property tax and income threshold constant (this

would imply a lower reduction rate for excessive income) would also expand benefits to all claimants above the threshold factor and would increase the number of eligible claimants.

Income Threshold. Increasing the \$8,060 income threshold along with the maximum income level, while holding the maximum property tax and reduction rate constant, would extend maximum benefits (80% of eligible property taxes) to all claimants between the old and new thresholds. All claimants above the new threshold would also receive increased credits.

Homestead as a Mechanism for Property Tax Relief

In 1964, Wisconsin pioneered the circuit breaker approach to property tax relief by establishing the homestead tax credit to relieve low-income homeowners and renters aged 65 or older of excessive property taxes. The homestead tax credit program targets property tax relief to low-income households through the income-based formula. The program attempts to address the property tax "burden" on an individual household. For affected households, the homestead credit introduces an ability-to-pay factor into the property tax system. Property tax relief programs paid directly or indirectly to municipalities cannot achieve such income-based targeting.

In 1966, the Wisconsin Supreme Court ruled that the homestead program was a relief program, since it considered the individual's income and needs, was available to renters as well as homeowners, and was not linked to the property tax administrative system. This finding was central to the Court's decision that the program did not violate uniformity requirements of the State Constitution (Harvey v. Morgan, 1966). This ruling has not been subsequently changed.

The homestead program grants relief solely to residential property owners and renters, unlike property tax relief programs paid directly or indirectly to municipalities. Credits paid to local governments benefit all property owners, but do not directly benefit renters. Renters may indirectly benefit from these credits (lower property taxes may result in smaller rent increases), but landlords are not required to pass along these savings.

Since homestead credits are paid directly to individuals and are not provided to all property owners, it is more difficult for local governments to increase spending to "capture" these credits. Taxpayers who receive these credits may offer less resistance to property tax increases, but spending increases would result in higher gross property tax

levies and taxpayers not receiving homestead credits would pay higher net taxes.

The homestead program cannot address other objectives frequently cited in property tax relief discussions. For example, it cannot reduce overall municipal tax rates or levies, or equalize tax bases among municipalities. If funds are distributed through the homestead program rather than through credits to local governments, the net nonresidential property tax will increase, although this type of property may also need relief. Finally, since homestead credits are not automatically applied to tax bills, but must be claimed on an individual basis, some individuals who are eligible for these credits may not receive relief.

APPENDIX

Sources of Income Included in "Household Income" Under the Homestead Tax Credit Program

Household income means Wisconsin adjusted gross income (AGI) plus the following amounts to the extent not included in Wisconsin AGI:

- Support money
- Cash public assistance (not including credits from this program or amounts granted under the community options program for long-term support) and cash benefits paid under county relief programs
- Maintenance payments (except that foster care maintenance and supplementary foster care payments are excludable)
- Gross amount of any pension or annuity
- Railroad retirement benefits
- Social security benefits
- Veterans disability pensions
- Nontaxable interest received from the federal government, or any of its instrumentalities
- Nontaxable interest received on state and municipal bonds
- Worker's compensation
- Unemployment insurance compensation
- Gross amount of "loss of time" insurance
- Compensation and other cash benefits received from the United States for past or present services in the armed forces
